

CAPSOL® is partnering with active shooter protection system, SafeDefend®, to offer a comprehensive, total emergency notification solution.

The Clock Starts When an Attack Begins SafeDefend® Solves the Critical Time Gap

The SafeDefend® System protects employees and staff during the critical time gap from the attack until help arrives. No other system in the world does this.

What are your staff and employees going to do between the time the incident starts, and the police arrive? They are on their own!

When a system is activated, the SafeDefend® Safety Cabinet can be accessed, and the life safety tools can be retrieved. SafeDefend® provides training to help Staff remain calm and confident in protecting themselves and others until help arrives.

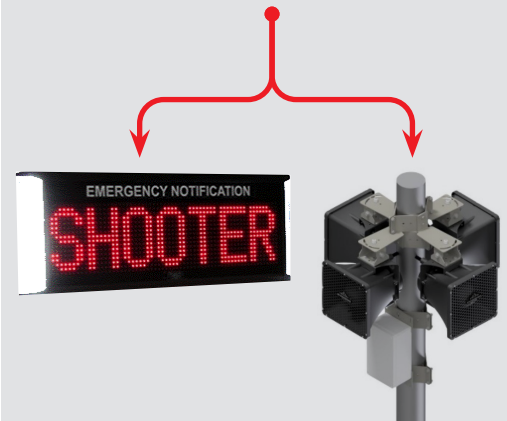

When an attack is detected, an alert is broadcast campus-wide. Notification messages including the building, address, room number or description, and nearest door location are sent to staff, safety teams, law enforcement, and the 911 call center.

Integrating with CAPSOL®, additional action can be taken.

Activation of LED Text Displays, Emergency Computer Messaging (Computer Desktop), Text to Speech over intercom or Giant Voice speakers, locking or unlocking doors, Instant Mobile Alerting™ or activating other systems are all part of a total solution.

Biometric Safety Cabinet and Activation Module

Preparation + Prevention + Response = Saving Lives

This is the ONLY formula that will make a difference.
